

Library Management System - Enhancement Summary

Prepared for: Ratna Sri Lekha Bonagiri

1. Category Handling

- Ensure 'Category' field exists in the Books table and model.
- Categories like 'Science' or 'History' can exist across multiple libraries.
- Do not restrict categories to a single library.
- Implement category-based filtering in the Angular UI.
- Add dropdown or search filter for category in BookComponent.
- API endpoint example: GET /api/books?category=Science

2. Donation Flow

- Users can donate books via a form in the Angular UI.
- Donated books are stored with Status = 'Pending'.
- Admin reviews donations and approves or rejects them.
- Approved books are assigned to libraries and become 'Active'.
- Librarians may optionally suggest library assignments.
- Recommended for time constraints: Admin-only approval flow.

3. Role Refinement

Current Roles:

- Member: View and donate books.
- Admin: Full CRUD on books, libraries, users.
- Librarian: CRUD on books, search across all libraries.

Refined Roles:

- Member: View and donate books.

- Admin: Approve donations, assign books to libraries, manage users.
- Librarian:
 - * View/search books in assigned libraries.
 - * Suggest library for donated books (optional).
 - * Update book status (e.g., damaged, lost).
 - * Remove direct CRUD access to books.

4. UI Adjustments

- Add category filter in BookComponent.
- Add Donate Book form for members.
- Add Admin dashboard to review and approve donations.
- Filter librarian views to show only assigned libraries.
- Add status update feature for librarians.
